Handover

Note for the handover:

As discussed with the client in the first meeting, the project is contained in github.com and it is a fork of an existing client repository. The handover will consist in a 'Pull request from the fork to the original project. The client can review the repository and accept the merge with its current repository. All documentation, test, user intructions, plugin, etc are contained in the repository.

For more detail how to operate, install, deploy adn continue developing this project check:
